To meet the current needs of researchers who perform systematic reviews in health care settings, libraries need to provide high-quality educational services for researchers as part of their systematic review services. A team of librarians with diverse skills is also important for ensuring the growth and sustainability of systematic review services. This commentary describes a new team-based systematic review service model that can transform systematic review services by providing a pathway for librarians to offer a comprehensive educational service for systematic review research in a variety of health sciences library settings.

framework of digital aging is proposed as the conclusion of this study.<sup>4</sup>

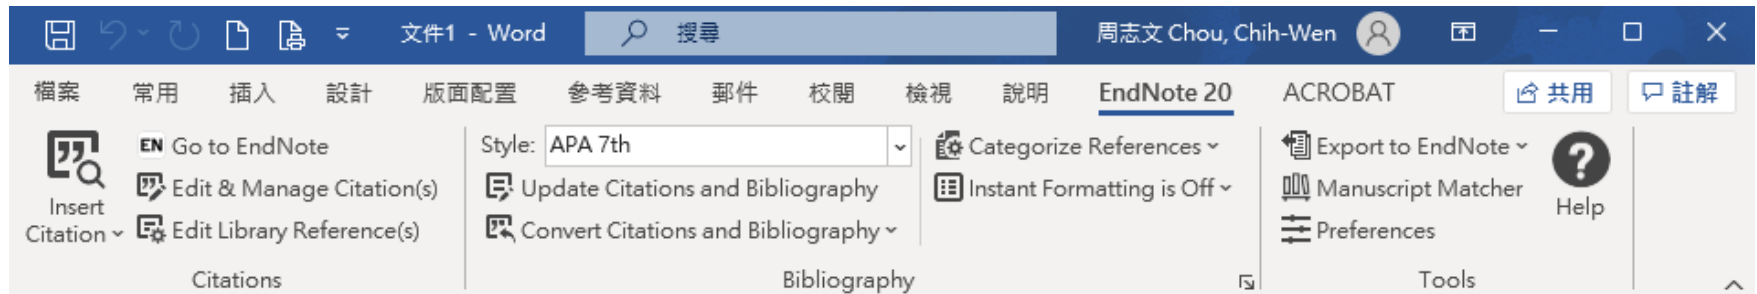

↵

## Active aging<sup>4</sup>

To live a healthy life, Kerschner and Pegues (1998) denoted that meaningful involvement, positive mental outlook, and relationships with others would be the keys to healthy aging. Particularly staying in active manner and functioning as a productive citizen are the essential elements in meaningful involvement to improve quality of life. Prior to the development of active aging, the United States back in the 1990s was advocating the productive aging that focused on the production of goods and services, which produced social and economic value (Hinterlong, Morrow-Howell, & Sherraden, 2001). The involvement in paid work, volunteering, lifelong learning, traveling, and other meaningful activities were also discussed (Kerschner & Pegues, 1998). To sustain a productive way of lifestyle from independence to interdependence (Kerschner & Pegues, 1998), older people could contribute to the society by dedicating to the care of youth and the disadvantaged groups, even more, delivering values and wisdom to the younger generations (Butler, 2010).<sup>4</sup>
